

StartupSage — Product Finalization & 3-Phase Release Plan

A section inside Build Pune Together | Target: Students nationally | English | Freemium

PART 1 — NAME SUGGESTIONS

The name needs to work for a national student audience, feel modern and aspirational, and sit naturally inside the BPT platform without overshadowing it.

Here are 5 options with reasoning:

Name	Feel	Why it works	Risk
FounderSim	Clean, direct	Exactly describes what it is. Students searching "startup simulation" find it.	Slightly functional, less aspirational
StartupSage	Wise, mentor-like	From the PDF — implies you become wise through experience. Strong for certification angle.	"Sage" may feel slightly Western
VentureX	Bold, energetic	X implies experiment + unknown. Appeals to engineering students.	Generic, hard to own
Runaai	Indian, unique	"Run" (to operate) + "aai" (mother in Marathi — the one who teaches). Deeply local.	Niche, may not resonate outside Maharashtra
BuildMode	Developer-friendly	Connects to BPT ("Build Pune Together"), implies a state of focus.	Less distinct as a standalone name

PART 2 — WHAT WE ARE BUILDING (Confirmed Feature List)

Features FROM THE PDF — Confirmed In

Feature	Phase	Reason
Core 8-stage narrative simulation	1	The foundation — nothing works without this
Domain selection (6 domains)	1	Personalization from day one
Founder Passport (shareable card)	1	Organic acquisition engine — launch viral loop early
Emotional check-in layer	1	The key differentiator — nobody else has this
India-specific scenarios + context	1	Non-negotiable for national student audience

Feature	Phase	Reason
Daily Founder Pulse (streak mechanic)	2	Retention engine — needed before D30 drop-off hits
Mentor Unlock System	2	Leverages BPT's 700 founders — unique moat
Competitor AI (named antagonist)	2	Makes Stage 6 alive, creates emotional investment
Domain replays (collect all founder types)	2	Pokémon mechanic — replay value
Cohort Leagues (city/college groups)	2	Campus distribution + E-Cell partnerships
Founder Certification	3	Revenue + credibility — needs incubator partnerships first
Real Pitch Room (AI → real investor)	3	Premium feature — needs investor pipeline ready
India Policy Layer (live events)	3	Needs content team — not a solo dev feature
Season resets	3	Needs enough users to make leaderboards meaningful
Language expansion (Hindi etc.)	3	English first, expand after product-market fit
Multiplayer Co-founder Mode	3 (maybe)	Revisit when Phase 2 retention data is in

Features NOT in the PDF — Added Based on Research

Feature	Phase	Why Added
Real founder voice notes at key stages	1	Bridges simulation to BPT community organically
"Bridge to BPT" screen at simulation end	1	The product flywheel — converts players to community members
Guest (no login) preview — first 2 stages	1	Reduces friction for student discovery
Freemium gate — after Stage 4	2	Natural paywall point after emotional investment is built
JobSahihai integration for certificate holders	3	Confirmed partnership — priority hiring signal

Features Removed / Deferred

Feature	Decision	Reason
Multiplayer Co-founder Mode	Phase 3 maybe	Too complex for solo dev, needs retention data first
Language packs	Phase 3	English first, validate nationally before translating
Franchise / licensing to global markets	Post Phase 3	Good vision, not a near-term build

PART 3 — THE 3-PHASE RELEASE PLAN

Release Philosophy

Users should feel the product grow with them — not discover it all at once and feel overwhelmed, and not wait too long for the next thing. Each phase ends with a clear milestone that validates the next phase is worth building.

PHASE 1 — "Feel It"

Goal: Get students to complete one full simulation and share their Founder Passport

Duration: 8 weeks to build | Launch target: first 1,000 completions

The one job of Phase 1: Make a student who has never thought seriously about starting a company finish a 20-minute simulation and immediately want to share what they learned. Everything else is noise.

What ships in Phase 1

1. The Core Simulation — 8 Stages

All 8 stages ship in Phase 1 but in a "lean" version. Each stage is: one screen of context, one decision with 2-3 options, one consequence screen. Total playtime target: 20–25 minutes for a first run.

Stage 0 — The Spark

User picks a problem domain (6 options — visual cards with icons and one-line descriptions):

 HealthTech	 EdTech	 FinTech
 AgriTech	 D2C	 SaaS

After domain selection:

AI generates a target customer persona (name, age, city, problem they face)

Example: "Meet Sunita, 34, a schoolteacher in Nagpur. She struggles to find

quality tuition for her daughter outside of expensive coaching centres."

One emotional prompt: "This is the problem you've chosen to solve. Does it matter to you? Because it will matter a lot more at 2 AM when things go wrong."

[Yes, let's go] button

Stage 1 — The Idea

3 simulated conversations (text-based, WhatsApp-style UI):
Conversation 1: A potential customer (skeptical)
Conversation 2: A domain expert (challenging your assumptions)
Conversation 3: A trusted friend (supportive but asking hard questions)

After each: user picks a response from 2 options
Each response shapes the "Problem Clarity Score" (hidden, influences Stage 2)

Decision at end: "Your idea in one line. Which version do you go with?"
Option A: Broad market, lower price
Option B: Niche market, higher price
Option C: Start with one specific customer type

Lesson card (10 seconds): "What you just did is called Customer Discovery.
Most founders skip this. The ones who don't, survive longer."

Stage 2 – The Plan

Business Model Canvas – guided, not blank
6 fields, each pre-filled with a placeholder, user edits:
Who is your customer? | What problem do you solve?
How do you reach them? | How do you make money?
What does it cost to acquire one customer? | What do you charge?

After filling: AI reality check appears for 2 fields
"Your CAC is ₹800. Your price is ₹299. You lose ₹501 on every customer.
What do you change?"
→ 3 options shown. Each has a hidden downstream consequence.

Lesson card: "A business model is just a guess. The best founders know this
and test it fast."

Stage 3 – The Team

3 co-founder profile cards appear (generated for their domain):
Profile A: Technical, introverted, high equity expectations
Profile B: Sales-focused, high energy, wants a salary from day one
Profile C: Domain expert, older, wants advisory equity only
[Go solo]

Choose one → Equity split screen:
Slider: You – Co-founder split (50-50 suggested)
"Your co-founder wants 40%. You want 60%. Do you negotiate or agree?"
→ 2 options. Each has consequences shown in Stage 5 (The Wall).

Emotional check-in #1:
"You just gave away part of your company to someone you met in a simulation.
How does that feel?"
Options: Excited / Nervous / Confident / Unsure
(Stored for Founder Passport – not judged)

Stage 4 – The Build

Virtual wallet: ₹5,00,000 (five lakh seed money)
Allocation screen – drag sliders across 4 areas:
🔧 Product/Tech | 📣 Marketing | 👥 Hiring | 🏢 Operations

Each allocation % shows a consequence preview:
"If you spend 70% on Tech: Strong product, slow growth, 3 months to launch"

"If you spend 50% on Marketing: Fast users, weak product, high churn risk"

User locks in allocation →

"60 days later. Your MVP is live. Here's what happened:"

→ Outcome card based on their allocation + earlier decisions

→ 3 possible outcomes (good launch / mixed / rough start)

Lesson card: "The first version is never the right version.

The goal is to learn, not to be right."

Stage 5 – The Wall

(Most important stage. Tone shifts here – darker, more serious.)

Opening screen: "Something has gone wrong. It always does."

One of 8 scenarios is assigned based on earlier choices:

If they chose a technical co-founder → "Your CTO just quit.

They got a job offer from a MNC for ₹18LPA. You have 30 days of runway."

If they went solo → "You're burning out. You haven't slept properly in 3 weeks.

Your product has bugs. Your first customer is asking for a refund."

If they chose B2C → "A competitor just launched. They're cheaper by ₹100

and have VC backing. Your early users are switching."

If they spent heavily on marketing → "Your CAC doubled.

The channel that worked in month 1 has stopped working.

You have ₹80,000 left."

[4 more scenarios for other decision paths]

Decision: 3 options shown – no "right" answer

Each option has a realistic consequence (not punishing – educational)

Emotional check-in #2:

"You just hit your first real wall. How are you feeling right now?"

Options: Scared / Angry / Focused / Defeated / Surprisingly calm

Real founder voice note unlocks here:

A real BPT founder (30 seconds, recorded once):

"When this happened to me, here's what I did..."

→ Founders contribute these during BPT community onboarding

Stage 6 – The Grind

Simulated dashboard: Month-by-month for 6 months

Each month: one decision prompt + one random event

Dashboard metrics shown:

Users/Customers | Monthly Revenue (₹) | Cash Remaining | Team Morale

Monthly decision examples:

"Your top salesperson wants a 30% raise. Grant it or let them go?"

"You've been offered a partnership with a larger company. Take it or stay independent?"

"Should you raise prices by 20% to improve margins?"

Competitor AI appears in month 3:

Named competitor (domain-specific): e.g., "QuickLearn" for EdTech

Appears as a news card: "QuickLearn just launched in your target market with VC backing of ₹2Cr. They're offering 3 months free."

→ One response decision per competitor event

Emotional check-in #3 at month 6:

"Six months in. Honestly – are you still glad you started?"

Stage 7 – The Crossroads

State of the startup shown: Revenue, users, team size, remaining cash

4 paths presented as cards:

- 🚀 Raise funding – "Pitch to investors. High risk, high upside."
- 💪 Bootstrap – "Grow slowly with your own revenue. Safe but slow."
- 💰 Sell – "A larger company wants to acquire you. ₹40L offer."
- 🛑 Shut down – "This isn't working. Cut losses and learn."

If they choose "Raise funding":

AI Investor Pitch – 3 questions, user picks answers

Investor responds with either: "We're in" / "Not yet" / "Come back in 6 months"

Each outcome has a realistic consequence

All paths continue to Stage 8 (no dead ends – every choice is valid)

Stage 8 – The Outcome

Full simulation debrief screen:

Revenue reached | Team built | Key decisions timeline

"Here's what shaped your journey" – 3 pivotal moments highlighted

Founder Profile revealed (based on decision patterns):

The Builder – You prioritize product over everything

The Hustler – You move fast and sell hard

The Strategist – You think before you act

The Visionary – You see the big picture but miss the details

The Survivor – You adapt under pressure better than most

Emotional Resilience Score (0-100):

Computed from 3 emotional check-ins + how they responded to The Wall

Shown as a simple dial – not a grade, a profile

Bridge to BPT screen:

"You just experienced what it feels like to build a [domain] startup.

There are [X] real founders on BPT doing exactly this right now."

[Join the BPT Community] → account creation / login

2. Founder Passport

Generated immediately after Stage 8 completes. A visual card (1080x1080px, shareable image) containing:

[BPT Logo + StartupSage badge]

[Name]'s Founder Passport

Domain: HealthTech

Founder Type: The Strategist

Emotional Score: 74 / 100

Key Decision: "Chose to pivot over fighting the competitor"

Startup outcome: ₹3.2L MRR | 847 users | Series A ready

"I survived the simulation. Now I'm ready for the real thing."

[QR code → their BPT profile or simulation results page]
[Share on LinkedIn] [Share on WhatsApp] [Download]

Designed to look beautiful — not a certificate, a badge of honour. LinkedIn-optimized dimensions. WhatsApp-friendly.

3. Guest Preview (No Login Required)

First 2 stages (The Spark + The Idea) playable without creating an account. After Stage 2: "Create your free account to continue your journey." This removes all friction for discovery — students can share a link, friends open it and play immediately without signing up first.

4. Real Founder Voice Notes (Phase 1 Content)

Record 8 voice notes before launch (one per stage that has a wall/challenge moment). Each note: 30–45 seconds. One BPT founder per note. Format: "When [this situation] happened to me, I [did X] because [reason]. Here's what I learned: [one sentence]."

Content team task before launch: identify 8 willing BPT founders, record via WhatsApp voice note, clean up audio, embed in simulation.

Phase 1 Freemium Gate

FREE (no account needed):	Stage 0 + Stage 1 (guest preview)
FREE (account needed):	Stages 0–4 (The Spark through The Build)
PREMIUM (₹299 one-time):	Stages 5–8 (The Wall, Grind, Crossroads, Outcome)
	+ Founder Passport
	+ Voice note unlocks

Why gate at Stage 4 not Stage 1: User has already spent 10–12 minutes. They've named their startup. They've met their co-founder. They've allocated their budget. The emotional investment is real. The paywall at this point converts because they genuinely want to know what happens next.

Phase 1 Success Metrics (Before Building Phase 2)

Metric	Target
Simulation starts	2,000 in first 30 days
Stage 4 completion rate	60%+
Paid conversion (Stage 4 → 5)	8%+
Founder Passports shared	300+
BPT account creations from simulation	400+
D7 retention (return to replay)	25%+

Do not build Phase 2 until Stage 4 completion rate is above 50%. If people are dropping before The Wall, the early stages need fixing first.

PHASE 2 — "Come Back"

Goal: Daily habit + mentor ecosystem live + replay unlocked

Duration: 10 weeks to build | Launch when Phase 1 metrics are hit

The one job of Phase 2: Turn a one-time player into a daily user and a daily user into a community member.

What ships in Phase 2

1. Daily Founder Pulse

A completely separate micro-feature from the main simulation. Lives on its own tab inside the StartupSage section.

Every morning at 8 AM (push notification + email):

One decision. One scenario. 3 options. Takes 60 seconds.

Format:

[Scenario card – 2 lines of context]

"Your biggest customer just asked for a 40% discount.
Without them you lose 30% of revenue."

[3 option buttons]

- A) Give the discount – keep the customer
- B) Negotiate – offer 15% for a 6-month contract
- C) Decline – your pricing holds or they leave

[After choice: consequence card – 3 lines]

"You gave the discount. They stayed. But 2 other customers
heard and asked for the same. Your margins dropped 12%.
This is called: Price Anchoring. Don't do it without a plan."

[Lesson name badge: "Price Anchoring – Learned ✓"]

Streak mechanic:

Streak counter shown on profile and Founder Passport

Miss one day: streak resets (not punishing – just resets to 0)

7-day streak: earns 1 Mentor Credit

30-day streak: "30-Day Founder" badge on Founder Passport

Content needed at launch: 90 Founder Pulse scenarios

(3 months of daily content before any repeat)

Organized by topic: Pricing / Hiring / Marketing /

Product / Fundraising / Competition / Operations / Mindset

2. Mentor Unlock System

Replaces the current voice note system with something deeper and interactive.

How it works:

At 5 key decision points in the simulation (Stages 3, 4, 5, 6, 7):

A mentor card appears before the decision:

"Consult a mentor before you decide? Costs 1 Mentor Credit."

If user spends a credit:

2-minute structured video/audio lesson from a real BPT mentor

Format: "Here's what I'd do. Here's exactly why. Here's what I've seen go wrong."

After lesson: user makes their decision with better information

Earning Mentor Credits:

Complete a simulation stage: +1 credit

7-day Founder Pulse streak: +1 credit

Refer a friend who completes Stage 2: +2 credits

Buy credit pack (premium): ₹99 for 5 credits

Mentor contribution side (BPT community):

Any BPT founder with 2+ years experience can apply to be a mentor

Records structured 2-minute lesson for a specific stage + scenario

Gets credited on the lesson card every time it plays

Earns "StartupSage Mentor" badge on BPT profile

Top 10 mentors by lesson plays featured on BPT homepage monthly

Content needed at launch: 15 mentor lessons (3 per key stage)

3. Domain Replay System

After completing one domain, the next unlocks.

Unlock sequence:

EdTech → AgriTech → HealthTech → D2C → FinTech → SaaS

Unlock condition: Complete previous domain above 50% Founder Score

(Encourages quality engagement, not speed-running)

What's different in each replay:

Different customer personas (genuine Indian characters)

Different Wall scenarios (domain-specific crises)

Different competitor AI name and behaviour

Different mentor voice notes

Same 8-stage structure (reduces build cost, maintains quality)

Domain completion badges:

Displayed on Founder Passport as collected badges

"HealthTech Survivor" | "AgriTech Builder" | etc.

Users who complete all 6 get "All-Domain Founder" – rare badge

4. Competitor AI (Named Antagonist)

Upgrades Stage 6 from "random events" to a persistent story.

Competitor appears at Stage 6, Month 3.

Name is domain-specific (pre-written, not AI-generated):

EdTech: "QuickLearn"
AgriTech: "FarmFast"
HealthTech: "MediGo"
D2C: "DirectCart"
FinTech: "PayFlow"
SaaS: "CloudEdge"

Competitor behaviour mirrors user decisions:

User goes B2C → Competitor goes B2B (flanking)
User raises prices → Competitor drops prices
User focuses on Tier-1 cities → Competitor enters Tier-2

Competitor "news feed" in dashboard:

Month 3: "[QuickLearn] just raised ₹2Cr seed funding"
Month 5: "[QuickLearn] crossed 10,000 users"
Month 6: "[QuickLearn] is hiring aggressively – 3 of your leads chose them"

One "spy" mechanic:

Spend ₹50,000 virtual money to "spy" on competitor
Reveals one of their next 2 moves – trade-off decision

5. Cohort Leagues

Groups of 10–20 players competing together.

How cohorts are formed:

Auto-assignment by: City (if BPT location data) OR College (if user provides)
OR manually join a cohort with a code (E-Cell creates a code for their college)

What a cohort has:

Shared leaderboard (ranked by Founder Score across their simulations)
Weekly cohort challenge: same Founder Pulse scenario for all members, compare how different people decided – leaderboard resets weekly
Cohort chat: WhatsApp group link (not in-app chat – too complex for Phase 2)
Platform generates a WhatsApp group invite when cohort hits 5 members

E-Cell partnership mechanic:

E-Cell creates a cohort with their college code
Students join via code → auto-tagged to that college
E-Cell gets a simple dashboard: how many students completed, avg scores
Top 3 students from cohort featured on BPT community page
E-Cell gets "Powered by StartupSage" badge for their events

Revenue from cohorts (Phase 2):

E-Cell institutional license: ₹4,999/semester
Unlimited students, cohort dashboard, branded leaderboard
First 5 colleges free (to build case studies)

Phase 2 Freemium Update

FREE: Stages 0–4 + Daily Founder Pulse (3 days only, then streak locked)
+ Domain 1 only (EdTech)

PREMIUM Stages 5-8 + Founder Passport
(₹299 one-time OR ₹99/month):
+ Full Daily Founder Pulse (unlimited streak)
+ All 6 domains
+ Mentor Credit starting pack (3 credits)
+ Cohort participation + leaderboard

INSTITUTIONAL: ₹4,999/semester per college E-Cell
Cohort dashboard + unlimited students + branded features

Phase 2 Success Metrics (Before Building Phase 3)

Metric	Target
D7 retention	40%+
D30 retention	20%+
Daily Founder Pulse DAU	1,000+
Domain replays (% of completers who replay)	30%+
Mentor lessons recorded	15+
E-Cell cohorts live	10+ colleges
Paying users (one-time or monthly)	200+

PHASE 3 — "Make It Real"

Goal: Certification + real investor access + season system + monetisation at scale

Duration: 12 weeks to build | Launch when Phase 2 retention targets are hit

The one job of Phase 3: Turn the best simulation players into real founders — and make that transition visible and credible enough that other students want it.

What ships in Phase 3

1. Founder Certification

Eligibility:

- Complete all 6 domains
- Average Founder Score above 70
- Minimum 30-day Founder Pulse streak at some point
- Pay certification fee: ₹499 (one-time)

What the certificate contains:

- Name | Founder Type | Domains completed | Emotional Resilience Score
- Issue date | Unique certificate ID (verifiable via QR code)
- Co-branded with: [BPT Logo] + [Partner Incubator Logos]

Partner incubators (target before Phase 3 launch):

3 from Pune (leverage existing BPT network)
1 from Bangalore
1 from Delhi/NCR

Approach: "Co-brand our certificate. Your logo on 1,000+ student profiles this year. Free for Year 1, licensing fee from Year 2."

LinkedIn integration:

"Add to LinkedIn" button on certificate page

Pre-filled credential entry:

Credential name: StartupSage Certified Founder

Issuing org: Build Pune Together

Credential URL: [verification link]

2. Real Pitch Room

Eligibility gate:

AI Investor Pitch score (Stage 7) of 75 or above

This filters to genuinely engaged, high-quality players

How it works:

After hitting 75+ score: notification + email

"You've unlocked access to a Real Pitch Room.

A BPT angel investor will review your simulation and speak with you for 15 minutes."

Player submits:

Their Founder Passport (auto-generated)

A 200-word "real idea" they want feedback on

Preferred time slots

BPT matches with an angel investor from the community:

Investor sees: Founder Passport + simulation decisions + real idea note

This is better than a cold intro – investor has 20 minutes of context

After the call:

Investor leaves a short written note (visible on player's profile – opt-in)

Player rates the session

If investor is interested in the real idea → warm intro to BPT investor network

Monetisation:

Free for first 3 Pitch Rooms per quarter (BPT absorbs cost – goodwill)

₹999 per session after that

Investors participate free – they get deal flow

3. India Policy Layer

A "Breaking News" feed inside the simulation.

Content team (1 person) updates 2-3 events per month.

Format: News card appears in Stage 6 dashboard between monthly decisions:

Headline: "DPIIT just announced ₹10Cr fund for AgriTech startups"

Sub: "Applications open for 60 days. Eligibility: less than 2 years old, Indian founder, less than ₹25L revenue."

Decision: "Do you apply? Takes 3 weeks of your time."

→ Yes: lose 3 weeks of execution time, gain ₹chance at ₹10L

→ No: keep momentum, miss the opportunity

Learning card: "This is called a Government Scheme."

Most founders ignore them. Smart ones track them."

Real-world connection:

Links to actual government scheme page (opens in browser)

Makes students follow real Indian startup news as a side effect

Content calendar: 24 events per year (2/month)

Sourced from: DPIIT, Startup India, RBI, SEBI, state government schemes

4. Season System

Seasons run quarterly (3 months each).

Each new season brings:

2 new Wall scenarios (fresh crises)

Updated Competitor AI behaviour

2 new India Policy events

Refreshed leaderboards (city + national)

New Founder Pulse scenarios (30 new ones per season)

Season structure:

Season start: announcement email + push to all users

Week 1-10: active season (play, compete, streak)

Week 11-12: finals (special challenge scenario for top 100 players)

Season end:

Top 10 national → featured on BPT homepage

Top 3 per city → featured in BPT city community space

All completers → Season badge on Founder Passport

Why this drives retention:

Players who finished in Season 1 return for Season 2 because

the game is genuinely different – new scenarios, new leaderboard slate.

FOMO: "If I don't play this season, I lose my ranking."

5. Multiplayer Co-founder Mode (If Phase 2 data supports it)

Decision criteria before building:

- D30 retention above 20% in Phase 2
- 500+ active paying users
- At least 30% of players have completed 2+ domains

If criteria met, build:

Two players, same startup, different roles

Player 1 picks: CEO (product + strategy decisions)

Player 2 picks: CTO or CMO (technical or marketing decisions)

Stage 3 becomes a live negotiation:

Equity split – both players must agree before proceeding

Real-time: both see the same screen, both submit their "offer"

If no agreement in 5 minutes: neutral split imposed (50-50)

Decisions split by role:

CEO sees: Hiring, strategy, fundraising, partnerships

CTO sees: Build vs buy, tech stack, product roadmap, technical debt

Both see: Budget, competitor events, Wall scenarios

Communication:

In-app text chat only (no voice – keeps it simple)
One shared decision per stage: both must click "agree"

Viral mechanic:

Can only play with someone you invite

Invite link sent via WhatsApp: "I'm starting a startup. Come be my co-founder."

K-factor: every player = 1 invite minimum

Phase 3 Freemium Update (Final Model)

FREE:

Stage 0-4 (first domain only)

Daily Founder Pulse (3 days/week only)

Guest preview without account

PRO – ₹299 one-time OR ₹149/month:

All 8 stages across all 6 domains

Full Daily Founder Pulse + streak

Mentor Credits (3/month)

Cohort participation

Competitor AI + Policy events

Season participation

CERTIFIED – ₹499 additional (one-time):

Founder Certification

Certificate on LinkedIn + Jobsahihai

"Certified" badge on Founder Passport

Priority access to Real Pitch Room

INSTITUTIONAL – ₹4,999/semester:

Unlimited students

Cohort dashboard for E-Cell

Branded leaderboard

Season reports for institution
